## FV-6136 Timezones: conceptual issue

Assignee	Slava Platonov	Resolution	Fixed
Status	Resolved	Created	24/11/16
Updated	04/06/17	Reporter	Pieter De Witte
Component	Database, Framework, Mobile	Resolved	04/06/17

### Description

In what timezone should we save stuff to the database?

### Comments

#1 Pieter De Witte

25/11/16

Misha D's comment:

Hi,  
 As i understand Mobile app/Kiosk/POS/Online kiosk should write "Creation date" and "Update date" into the same fields inside T\_PERSON. So they all should use the same timezone.  
 I would send "UTC" time through the API and in backend use this "UTC" time and timezone(you can take timezone from T\_ADRESS for person with ID=-1) to convert it to "local server time". So all out software "Mobile app/Kiosk/POS/Online kiosk" will use "local server time".

Misha D

## FV-6316 Frontend: Live Timing

Assignee	Slava Platonov	Resolution	Fixed
Status	Resolved	Created	09/01/17
Updated	31/05/17	Reporter	Pieter De Witte
Component	Mobile	Resolved	31/05/17

### Description

It should be a separate Angular Module, so we can reuse it on the web later.

The live timing will run in 2 modes:

#### \* Portrait

We show a limited set of columns. One of those columns will depend on the race mode. We will show best time (for best time races) OR gap (for most laps races). We will show a hint that you can rotate the screen to view more details.

#### \* Landscape

Here we'll have all the columns available. Some might be outside of the screen, so you'd have to scroll for them. When scrolling, ideally the nickname would stay visible. We'll have to see if that's possible.

Fields of the websockets data:

#### HEAT

```
// "N" = HeatName
// "S" = State
//     0 = not started
//     1 = running
//     2 = paused
//     3 = stopped
//     4 = finished
//     5 = next heat
// "E" = EndCondition
//     0 = the heat needs to be finished manual
//     1 = the heat finishes after X time
//     2 = the heat finishes after X laps
//     3 = the heat finished after X time or X laps. Depends on wich one is first
// "R" = RaceMode
//     0 = most laps wins
//     1 = the best lapttime is the winner
//     2 = the best average time is the winner
// "D" = Drivers [array]
// "C" = Counter (in milliseconds)
// "CS" = ClockStarted
//     0 = not started
//     1 = started
// "L" = RemainingLaps
// "T" = ActualHeatStart
```

#### DRIVER

```
// "D" = DriverID
// "M" = WebMemberID
// "N" = DriverName
// "K" = KartNumber
```

```
// "P" = Position
// "L" = Laps
// "T" = LastLapTimeMS
// "A" = AvarageLapTimeMS
// "B" = BestLapTimeMS
// "G" = gap
// "LP" = LastPassing
//      0 = not the last passing
//      1 = last passing
// "R" = LastRecord
```

Make the clock a separate component.

Clock shows remaining time (Counter) or remaining laps (RemainingLaps), depending on the EndCondition.

If the end condition is 3, show Counter unless it's 0, then show remaining laps.

If the end condition is 0, don't show anything.

The clock should count down independently and just correct itself if notices it's more than 1 or 2 seconds off with the incoming web sockets data.

if you run this on the demo system, it fails over certain actions

### Comments

#1 Misha Obolonin

31/01/17

It fails for sure in case if race was started, since there are trigger T\_BLL\_VOID\_PAR on T\_BILL\_LINE that throws exception all the time when race is not idle.

#2 Alexander Muylaert-Gelein

04/06/17

already solved a while, there was no "where" clause in the update statement

## FV-6594 Configurator screens for T\_WEB\_PAGE

Assignee	Slava Platonov	Resolution	Fixed
Status	Resolved	Created	13/02/17
Updated	15/06/17	Reporter	Pieter De Witte
Component	Configurator, Mobile	Resolved	15/06/17

### Description

Create configuration screens for T\_WEB\_PAGE.

Keep in mind there's a hierarchy, it's best to show them like that as well.

I'd like to create two separate configurations, using the same components:

- \*1. Dashboard items (kind 5)
2. All the rest\*

These are the other kinds:

\*0 = MENU ITEM\*

Serves as a "parent" to other menu items. You can only attach children to parents with

this kind.

\*1 = WEBVIEW\*

Plain content (HTML editor).

Bonus points: can we inline the CSS styles, and exclude the html header?

\*2 = EXTERNAL LINK\*

This will open an external webbrowser. Replace HTML editor by url edit.

\*3 = INTERNAL LINK\*

This will open an webbrowser inside the app. Replace HTML editor by url edit.

\*4 = OPENING HOURS\*

Plain content (HTML editor).

You can still put HTML here, but it will also generate the opening hours to show below.

## FV-7238 Minor registration with separate survey

Assignee	Misha Obolonin	Resolution	Fixed
Status	Resolved	Created	07/05/17
Updated	14/06/17	Reporter	Misha Obolonin
Component	Kiosk	Resolved	14/06/17

### Description

Current batch minor procedure gives a lot of misunderstanding.

It would be better to use separate survey for minors registration and pay it in the loop with question "Do you want to register another minor?".

This way it is straightforward process.

we'll have to reuse Persons field for minors, use surveyQuestionSetting IsMinor for such questions, as:

- FirstName
- LastName (will always pre fill last name of the guardian)
- Gender
- Birthday
- email (prefill from guardian)
- Picture
- signature

### Comments

#1 Misha Obolonin

14/06/17

Hi Michiel,

It's already exists and working. you can check it in Andretti database.

Basically it's a Custom question -> Survey page, where you can select a minor's survey, and BatchOverview custom question that runs this survey in a loop.

---

## FV-7239 Create Minors overview control

### Description

To show at the end of minors registration.

List box with Firstname and lastname of minors.

User can click modify and delete.

On modify it will go to minor survey with prefilled properties of that minor.

## FV-7493 StoredProc controller doesn't refresh list

Assignee	Alexander Muylaert-Gelein	Resolution	Fixed
Status	Resolved	Created	02/06/17
Updated	03/06/17	Reporter	Misha Obolonin
Component	Booking	Resolved	03/06/17

### Description

Check PersonDeposits controller. it doesn't refresh the list when you switching persons.

it doesn't change InternalDataSource on controller line 479:

```

        if (!InternalAutoCommit())
        {
            return;
        }

```

The reason is AutoCommit, It always failed since commit is disabled for that kind of controllers in OnVerifyCommit

GOnline.Common.Dal.LLBLGenPro.Controller line 215:

```
return base.OnVerifyCommit(aData) && (aData.HasDetail || aData.List is IEntity2))
```

### Comments

**FV-7501 Research unq and pk behavior on Global temp Table**

Assignee	Alexander Muylaert-Gelein	Resolution	Fixed
Status	Resolved	Created	04/06/17
Updated	30/06/17	Reporter	Alexander Muylaert-Gelein
Component	Database	Resolved	30/06/17

**Description**

Hi Jiri

We use sometimes GTT to store temp values. I was always under the impression that a GTT behaved the same as normal tables when it comes down to uniques and pk constraints

I tested it (under fb3)

a PK on a GTT does NOT enforce uniqueness over transactions. Is this correct? It is a good thing, because now I do all kinds of weird shit to make it "non-unique indices

called "PK\_..."

But if multiple transactions can insert the same key inside a GTT, then I should rewrite some stuff. I have tested it and I'm pretty sure I'm right, but I need a second opinion.

Thanks

a

## Comments

#1 Jiri Cincura

22/06/17

Yes, that's as expected.

From the docs:

{quote}Every transaction or connection has its own private instance of a GTT, isolated from all the others.{quote}

## FV-7564 Jira - Stable25 - teamcity versions

Assignee	Jiri Cincura	Resolution	Fixed
Status	Resolved	Created	09/06/17
Updated	22/06/17	Reporter	Alexander Muylaert-Gelein
Component	Framework	Resolved	22/06/17

### Description

Hi Jiri

The current stable version needs to be maintained for a very long time. I have done it in such a way that we first need to upgrade to THIS version and this upgrader will

prepare everything for Fb3.

It would be nice if you could make another "STABLE25" project in Teamcity. This should contain the code of the current stable end of this month and should NEVER be automatically switched.

The other version, Alpha, Beta and stable can then continue their normal process.

## Comments

#1 Jiri Cincura

19/06/17

Is it OK if we create a folder in `~/Versions`, let's say `stable25`? From that it's easy for me to build it.

#2 Alexander Muylaert-Gelein

21/06/17

perfect

#3 Jiri Cincura

22/06/17

Done in [http://build.sms-timing.com:3030/viewType.html?buildTypeId=Fast5\\_Releases\\_Stable25](http://build.sms-timing.com:3030/viewType.html?buildTypeId=Fast5_Releases_Stable25).

## FV-7566 Reservation: System crashes when you make a reservation over multiple days.

## FV-7583 Passings: RebuildAll issue

Assignee	Misha Dykov	Resolution	Fixed
Status	Resolved	Created	09/06/17
Updated	27/06/17	Reporter	Jens Van Herck
Component	Timing	Resolved	27/06/17

### Description

Gokarting.dk

Take their database  
 Run Timing  
 Add drivers into heat  
 Do simulation with couple of laps  
 Turn off simulation  
 Start the heat

Drag and drop the "Heat Open" and "Green Flag" under the passings with "No Session Started"

Save it

Passings with laptimes are still "No Session Started", the heat is not updated with the laptimes.

Also test this:

When you dragged and dropped a passing on another place, click on the "Filter Resource" checkbox, the dragged and dropped passing will switch back to the original position. If you turn off the checkbox it will jump back to the other position.

## FV-7600 Payment rounding with discount percentage - Yomani terminal error

Assignee	Misha Dykov	Resolution	Fixed
Status	Resolved	Created	13/06/17
Updated	19/06/17	Reporter	Michiel Pauwels
Component	Booking	Resolved	19/06/17

### Description

Powerarea has a 15% discount for their staff.

When someone buys a coffee of 2.70 and gets 15% discount the payment screen shows an amount of 2.295 to pay.

When you want to pay this with the Yomani terminal, it gives an error.

When you manually change the amount to pay to 2.29 or 2.30, there is an open amount of 0.005 after the payment has been done.

I've attached a screenshot.

### Comments

#1 Michiel Pauwels	19/06/17
Same problem occurs when you split the payment in 1/3 for example...	
#2 Michiel Pauwels	19/06/17
Same problem occurs when you split the payment in 1/3 for example	
#3 Misha Dykov	19/06/17
IT is different issue. I created separate ticket for it <a href="http://jira.sms-timing.com:8080/browse/FV-7641">http://jira.sms-timing.com:8080/browse/FV-7641</a>
